

Rajagiri International School now in Dubai

BY A STAFF REPORTER

THE management of India's renowned Rajagiri International School has extended the idea to provide contemporary education with holistic approach in the UAE by setting up a new international primary school in Dubai.

The school has been established with an ambition to impart quality education based on the curriculum prescribed by the Central Board of Secondary Education (CBSE), New Delhi.

The school would open in April for students of class KG1 to Grade 3, admissions for which are on in full swing.

Situated in Al Warqan area of Dubai, Rajagiri International School is managed by Rajagiri Province

of CMI (Carmelites of Mary Immaculate) congregation and facilitated by the UAE-based Sudhir Gopi Holdings Inc. The school will provide excellence in academics by giving utmost importance to moral values and discipline, love and respect for parents and elders and concern for fellow human beings.

The school is headed by experienced and dedicated CMIs as well as a team of experienced faculty. The school is equipped with all facilities including modern classrooms, well updated library, information and communication technology labs, audio-visual and multimedia hall, recreation rooms, medical clinic as well as two swimming pools and facilities for indoor and outdoor sports.

"Our vision in imparting education is to mould, groom and transform the students in becoming future world leaders with intellectual competence, spiritual maturity, moral up-rightness, psychological integrity, physical and mental health and social acceptance to enable them to become champions for the cause of justice, love, truth and peace and ever open to further growth," said Dr Fr Mathew Vattathara CMI, academic director of the school.

The school aims to provide the most conducive environment, where true education complements academic excellence with character and personality development. The school has modern classrooms to facilitate modern teaching methodologies and has thus embraced the advan-

tages that higher technology has to offer and ensured its smooth blending in with traditional chalk and talk. This makes school's commitment to gearing students to navigate the information superhighway that is changing the world.

The school is also equipped with computer and networking facilities to support learning, teaching and research. A state-of-the-art Computer Lab helps in effectively integrating technology into the core curriculum and is capable of providing high quality training to the students. The school also has a Cognitive and Motor-Skills Development Centre and an Audio-Visual and Multi Media Hall to help the students in their quest for knowledge. A well-stocked library pro-

vides the faculty and students with resources and services, which will assist them in their fields of teaching/study and areas of responsibility as well as support their non-curricular or recreational needs.

According to Dr Fr Mathew Vattathara CMI, the CMI Congregation has excelled in the field of education, ever since it opened its first school in 1846. The congregation has built up a vast network of schools and colleges spread around the world. About 2,500 members of the congregation manage over 500 educational institutions, providing education from pre-primary to post doctoral levels in all fields of education including medicine, engineering, management, arts and social sciences.
